

“

These projects show how provincial development is becoming more practical, targeted and measurable. From Gauteng's water systems to the Western Cape's resilience planning and the North West's road and housing priorities, provinces are increasingly being judged by visible delivery on the ground.

”

MAJOR PROJECTS UNDERWAY

Across South Africa's nine provinces, major public-sector projects are moving from planning tables into communities, industrial zones, roads, water networks and digital systems. These projects reflect a national push to use infrastructure as a driver of economic growth, service delivery and job creation. In the 2026 national budget, government confirmed that public-sector infrastructure spending will exceed R1 trillion over the medium term, with provinces and municipalities playing a central role in delivery.

These projects show how provincial development is becoming more practical, targeted and measurable. From Gauteng's water systems to the Western Cape's resilience planning and the North West's road and housing priorities, provinces are increasingly being judged by visible delivery on the ground.

AT A GLANCE

Public-sector infrastructure
spending: Over R1 trillion
