

UPDATES FROM ESKOM, TRANSNET, SANRAL AND OTHER AGENCIES

South Africa's state-owned enterprises and public agencies remain central to the country's economic recovery, infrastructure delivery and long-term development. In 2026, the focus has shifted from crisis management toward reform, operational stability, private-sector collaboration and improved delivery across energy, logistics, roads, ports, rail and aviation.

Eskom has entered a new phase of recovery after recording more than 400 days without load shedding. The utility has reported improved generation availability, reduced unplanned outages and lower diesel spending, supported by its Generation Recovery Plan. According to recent updates, Eskom's Energy Availability Factor improved to 63.81%, compared with 58.31% over the same period last year, while average unplanned outages between 19 and 25 June 2026 were significantly lower than the same week in 2025.

At the same time, the electricity sector is undergoing structural reform through the National Transmission Company South Africa. Eskom, NTCSA, RTE International and the Agence Française de Développement signed a cooperation agreement in June 2026 to strengthen South Africa's power grid, with the work focused on renewable energy integration, system stability, artificial intelligence, analytics, high-voltage transmission and modern grid skills.
