

“

From power generation and freight rail to national roads and logistics corridors, South Africa's state-owned enterprises and public agencies remain central to economic recovery and long-term development.

”

Transnet's reform story is equally important. In May 2026, the Transnet Rail Infrastructure Manager announced 11 train operating companies that were allocated slots on Transnet's rail network. This is a major milestone in opening the national rail system to private operators, increasing active operators from one to 12 across five strategic corridors and introducing additional freight capacity to support mining, agriculture, automotive, fuel, container and general freight movement.

upgrades, with projects expected to support road safety, shorten travel distances, create more than 35,000 job opportunities and support over 2,000 small enterprises.

Together, these developments show how SOEs and agencies are being repositioned as delivery platforms. Their success matters not only to government, but to every household, commuter, exporter, manufacturer, contractor and small business that depends on reliable infrastructure.

WHY IT MATTERS

- ✓ More reliable power for households and businesses
- ✓ Stronger logistics and rail capacity to boost exports and trade
- ✓ Better roads that improve mobility, safety and reduce costs
- ✓ More jobs, opportunities and support for small enterprises
- ✓ Greater investor and business confidence in South Africa

SANRAL continues to play a central role in road infrastructure. Government has allocated almost R31 billion to SANRAL in 2026 to maintain, rehabilitate, upgrade and expand the road network. The allocation includes work on the non-toll road network, the N2 Wild Coast route, the Moloto Road corridor and national highway
